

Project Demo Planning

Date	06 July 2026
Team ID	
Project Name	Voice Based Concept Understanding Analyser
Maximum Marks	1 Mark

Project Demo Planning:

The project demonstration is planned in a structured manner to clearly present the working of the Voice-Based Concept Understanding Analyzer. As this is a solo project, the entire demonstration is handled individually, ensuring a smooth and logical flow from introduction to final output. The demo begins with a brief explanation of the problem statement, highlighting the need for analyzing concept understanding through voice input.

This is followed by an overview of the proposed solution, where the system architecture and key functionalities are explained. The main focus of the demonstration is the live execution of the application, including uploading or recording audio, converting speech to text, visualizing the waveform, and generating analytical scores. Each step is demonstrated clearly to show how the system processes input and produces meaningful results.

The demonstration concludes with the generation of a detailed PDF report, showcasing all evaluation metrics and outputs. Finally, a short Q&A session is included to address any questions and explain technical aspects of the project if required.

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Brief explanation of the project idea and objectives
2	Solution Overview	Explanation of system design and working
3	Live Feature Demonstration	Running the application with real input
4	Q&A Session	Answering questions and clarifications
