

Scalability & Future Plan

Date	06 July 2026
Team ID	
Project Name	Voice Based Concept Understanding Analyser
Maximum Marks	1 Mark

Scalability & Future Plan:

The current system is designed to handle single-user interactions efficiently in a local environment. However, as the usage increases, certain limitations may arise such as handling multiple users simultaneously, limited data storage, and performance constraints during heavy processing tasks like audio analysis and NLP computation.

To address these limitations, the system can be scaled by deploying it on cloud platforms, enabling support for multiple users at the same time. Data storage can be improved by integrating databases to store user inputs and reports efficiently. Performance can be enhanced using optimized models and better hardware support, while security can be strengthened by adding authentication and secure data handling mechanisms.

In the future, the project can be extended by adding advanced features such as real-time voice analysis, multi-language support, and improved AI-based evaluation models. Additional enhancements like user login systems, history tracking, and dashboard analytics can make the application more interactive and suitable for real-world applications such as education and interview assessment.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
-------	-------------------------------	-----------------	-----------------

- Phase 1: Improve model accuracy and optimize performance
- Phase 2: Add multi-user support and database integration
- Phase 3: Implement authentication and security features
- Phase 4: Introduce advanced analytics and multi-language support
